# Berry's Finest Finds Her "Somewhere Over The Rainbow"

This weekend at the Pot O' Gold Show and Sale, the Berry Farms Genetics Enterprise hit the jack pot with the sale of our short-bred heifer. Of the thirty-two consigned animals at the sale, Berrys Gannon Medley Linda Sue sold for a respectable $5,000 to Colin Russell of Yosemite Farms in Hilmar, California. The Berry Farms Genetics Enterprise would like to thank Colin Russell, as well as all bidders, for their interest in this prized short-bred heifer. All proceeds from this sale are to go to the Berry College Agriculture Program to better educate the future generation of agriculture leaders. The Berry Farms Genetics Enterprise is excited about Linda Sue's new life and would like to wish Mr. Russell success with one of Berry's finest.

The Berry Farms Genetic Enterprise would like to thank all of our supporters for their invaluable assistance and encouragement throughout the Pot O' Gold Sale.

## Generations of Greatness Proven in Medley Family Lineage

The Medley cow family can be traced back several generations through the Berry College Dairy Jersey herd. This cow family is respected for its consistency in the heritability of soundly structured and high producing cows from generation to generation. Berry College's consigned, short-bred heifer, Berrys Gannon Medley Linda Sue, who was sold at this year's Pot O' Gold Show and Sale in Louisville, Kentucky, is a descendant of this family of top producing cows. The twelfth dam, Mermaid Tristam Sarah, produced a son that eventually became an active AI bull. A huge thank you to Bill Maness with Jersey Origins for his help in research on the Medley cow family.

Dam, Berrys Daniel Mindie (on right), and Granddam, Berrys Parade Medley-ET (on left), of the consigned short bred heifer, Berrys Gannon Medley Linda Sue.
