Breakfast Bytes: 10th Anniversary Series

Friday, October 6

8:00 - 8:45 a.m. Library Classroom

Podcasting for Beginners

Is there a podcast in your teaching future? Come learn how faculty on other campuses are using this application, see a locally produced podcast, and watch a demonstration of how easy podcasts are to create. This workshop will complement the CIT demos you'll see during their *Lunch and Learning* session.

Workshop co-sponsors: Center for Teaching Excellence & Center for Instructional Technology

Friday, October 13

8:00 - 8:45 a.m. Library Classroom

Collective Intelligence, or Tagging 101

Examples abound: Wikipedia, Library Thing, YouTube, Flickr, Del.icio.us... all collaborative approaches that are stunning successes because they are designed to keep the user front and center and build intellectual capital. Ok, maybe you're not willing to go quite that far! But this workshop will examine some of the critical issues associated with user tagging and show how it is transforming some very traditional library approaches to information.

Friday, October 27

8:00 - 8:45 a.m. Library Classroom

Second Life: Lessons Learned from Research Avatars of the Virtual World

Why would you consider having your students spend more time in a virtual environment when reality is so much more instructive and challenging? In-the-know, reality-grounded librarians will serve as your trusty guides and lead you into *Second Life*, the most well-known platform from this shadow world that has become a popular laboratory for the study of individual and group behavior as well as an alternative research environment for a variety of disciplines.

Friday, November 3

8:00 - 8:45 a.m. Library Classroom

So Much Access, So Little to Show for It: Lighting the Way to the Good Stuff

Our students have unlimited access to thousands of scholarly electronic journals, scores of core databases and other research tools, strong traditional print collections, a robust interlibrary loan and document delivery system, and so much more. So what goes awry between their use of these resources and their final reference lists? This presentation will examine how the Google suite of products and new developments in WorldCat.org can help us meet the students where they are and serve as beautiful bridges from the screen to the stacks.

Workshop co-sponsor: Center for Teaching Excellence

Breakfast Bytes Fall 2006

I plan to attend the following Breakfast Bytes session(s)

- Podcasting for Beginners**
- Collective Intelligence, or Tagging 101**
- Second Life: Lessons Learned from Research Avatars of the Virtual World***
- So Much Access, So Little to Show for It: Lighting the Way to the Good Stuff***
